

Familias Ciberinformadas

Teach your child how to protect themselves online.

Computational thinking and internet security

What is computational thinking?

- ★ Break problems down into smaller parts.
- ★ Identify patterns.
- ★ Separate what's important.
- ★ Decide step by step.

How does this apply to the internet?

- ★ Don't settle for the first result.
- ★ Understand that algorithms decide what we see.
- ★ Be wary of sensational headlines.
- ★ Think before you click or share.

Encourage it at home:

- ★ Ask why they believe something.
- ★ Look for more than one source.
- ★ Talk about what they see on social media.
- ★ Remember that the internet doesn't show the whole picture.

Encourage critical thinking for safe navigation.
